

Zomato Online Food Ordering System

1. Introduction

1.1 Purpose

This Software Requirements Specification (SRS) document defines the functional and non-functional requirements of the Zomato Online Food Ordering System. It serves as a reference for developers, testers, project managers, and stakeholders to understand the system requirements and ensure successful implementation.

1.2 Scope

The Zomato Online Food Ordering System enables customers to browse restaurants, search for food items, place online orders, make secure payments, and track deliveries. Restaurants can manage menus and orders, while delivery partners can receive and update delivery statuses.

The system does not include restaurant inventory management or employee payroll management.

1.3 Definitions, Acronyms, Abbreviations

Term	Description
SRS	Software Requirements Specification
UI	User Interface
OTP	One-Time Password
GPS	Global Positioning System
API	Application Programming Interface
Admin	System Administrator

2. Overall Description

2.1 Product Perspective

The Zomato Online Food Ordering System is a web and mobile application that connects customers, restaurants, delivery partners, and administrators. It integrates with payment gateways, GPS services, and notification systems.

2.2 User Classes and Characteristics

Customer

Register and log in

Search restaurants

Order food

Make payments

Track deliveries

Rate restaurants

Restaurant Partner

Manage menu

Accept or reject orders

Update food preparation status

View sales reports

Delivery Partner
Accept delivery requests
Navigate using GPS
Update delivery status
Administrator
Manage users
Monitor restaurants
Handle complaints
Generate reports

2.3 Assumptions and Dependencies

Internet connection is available.
Payment gateway services are operational.
GPS location services are enabled.
Restaurants maintain updated menus.
SMS and email notification services are available.

3. Functional Requirements

ID	Requirement	Priority
FR-01	The system shall allow users to register and log in securely.	High
FR-02	The system shall allow customers to search restaurants by name, cuisine, or location.	High
FR-03	The system shall display restaurant menus with prices and images.	High
FR-04	The system shall allow customers to add food items to the cart.	High
FR-05	The system shall allow customers to place food orders.	High
FR-06	The system shall support online payment methods.	High
FR-07	The system shall provide real-time order tracking.	High
FR-08	Restaurants shall receive and manage customer orders.	High
FR-09	Delivery partners shall update delivery status.	High
FR-10	Customers shall rate and review restaurants after delivery.	Medium
FR-11	The administrator shall manage users and restaurants.	High
FR-12	The system shall generate reports on orders and revenue.	Medium

4. Non-Functional Requirements

4.1 Performance

The system shall respond to user requests within 2 seconds under normal load.
The application shall support thousands of concurrent users.
Order confirmation shall be processed within 5 seconds.

4.2 Security

Passwords shall be stored using encrypted hashing.
User authentication shall require secure login credentials.
Payment information shall be securely processed.
User data shall remain confidential.

4.3 Usability

The interface shall be simple and user-friendly.
Users shall be able to place an order without training.
The application shall support Android, iOS, and web browsers.
Navigation shall be intuitive.

5. Use Cases

Use Case 1: Customer Places an Order

Actor: Customer

Trigger: Customer selects food items.

Main Flow

Customer logs in.

Customer searches for a restaurant.

Customer selects food items.

Customer adds items to the cart.

Customer proceeds to checkout.

Customer selects a payment method.

Customer confirms the order.

Restaurant receives the order.

Delivery partner delivers the order.

Customer receives the food.

Alternate Flow

Payment fails.

Restaurant rejects the order.

Delivery is delayed.

Customer cancels the order before preparation.

Use Case 2: Restaurant Accepts an Order

Actor: Restaurant Partner

Trigger: New order received.

Main Flow

Restaurant receives notification.

Restaurant accepts the order.

Food is prepared.

Order is marked ready.

Delivery partner picks up the order.

Use Case 3: Delivery Partner Delivers Food

Actor: Delivery Partner

Trigger: Assigned delivery.

Main Flow

Delivery partner accepts delivery.

Picks up food.

Navigates to customer location.

Delivers food.

Marks delivery as completed.

6. Appendix

Glossary

Customer – Person ordering food.

Restaurant Partner – Restaurant registered on the platform.

Delivery Partner – Person delivering food.

Administrator – Person managing the system.
