

Software Requirements Specification

Template — Software Engineering (24PCA402)

1. Introduction

1.1 Purpose

Describe why this document exists and who should read it.

1.2 Scope

Describe the product being specified and what it will (and will not) do.

1.3 Definitions, Acronyms, Abbreviations

List any domain-specific terms used in this document.

2. Overall Description

2.1 Product Perspective

How does this system relate to other systems or the broader environment?

2.2 User Classes and Characteristics

Who will use the system, and what are their relevant characteristics?

2.3 Assumptions and Dependencies

List assumptions made and any external dependencies.

3. Functional Requirements

List each function the system must perform. Example table below.

ID	Requirement	Priority
FR-01	The system shall allow a member to search the catalog by title, author, or ISBN.	High
FR-02	The system shall allow a librarian to check out and return items.	High
FR-03	The system shall send an email reminder 2 days before a due date.	Medium

4. Non-Functional Requirements

4.1 Performance

e.g. The system shall respond to a search query within 2 seconds under normal load.

4.2 Security

e.g. Passwords shall be stored using a salted hash.

4.3 Usability

e.g. A first-time user shall be able to complete a search without training.

5. Use Cases

Attach or describe primary use cases (actor, trigger, main flow, alternate flows).

6. Appendix

Supporting diagrams, glossary, and references go here.
